

$$\overline{\chi} = 15\chi_i = 10 = 2$$

$$N$$

$$\overline{Y} = \underline{J} \leq \underline{Y} = \underline{30} = 6$$

$$S_{x}^{2} = \frac{1}{N} \underbrace{\left(x_{i} - \overline{x}\right)^{2}}_{i} = 2$$

$$S_{Y}^{2} = \frac{1}{N} = \frac{1}{2} \left( \frac{1}{1 - 1} \right)^{2} = 37.2$$

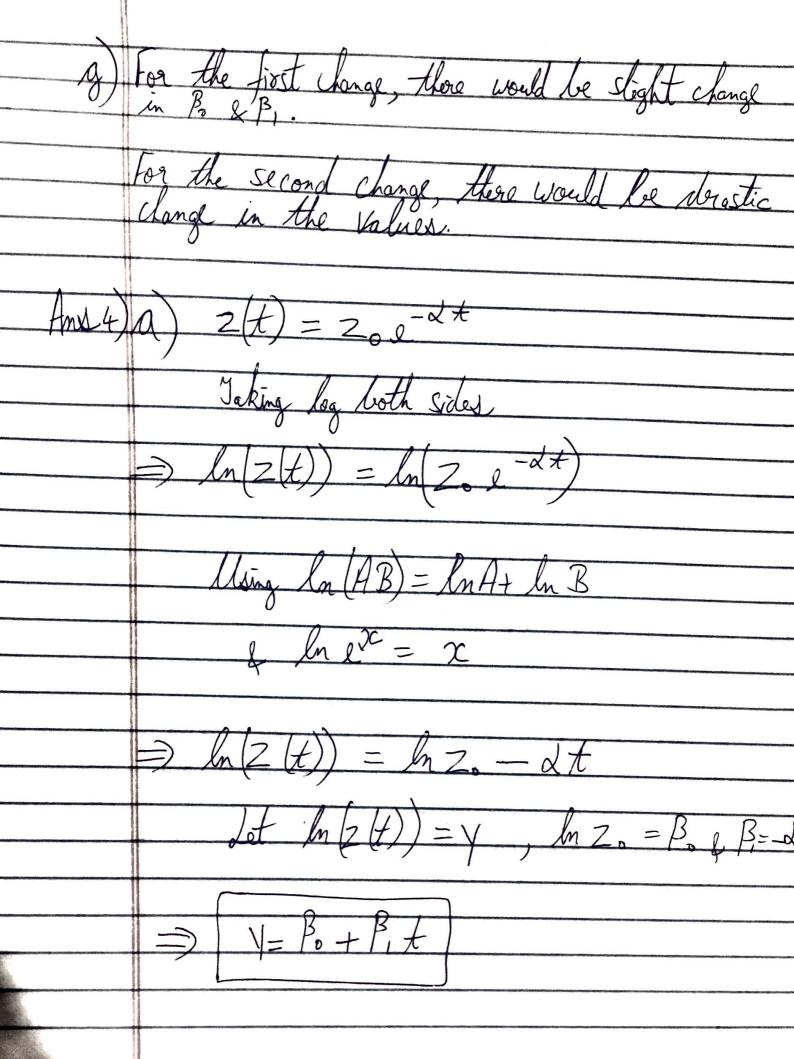

$$S_{xcy} = \frac{1}{N} \underbrace{S}(x; -\overline{x})(\underline{y}; -\overline{y}) = 8$$

$$\begin{array}{c|c} C & \beta_1 = S_{2e_Y} = 4 \\ \hline S_{2c} & \end{array}$$

A) 
$$\sqrt{1 = \beta_0 + \beta_1 x}$$
 $\sqrt{1 = \beta_0 + \beta_1 x}$ 
 $\sqrt{1 = \beta_0 + \beta_0 x}$ 
 $\sqrt{1 = \beta$ 

$$TSS = \frac{1}{2}(y_1 - \overline{y})^2 = 186$$
,  $RSS = \frac{1}{2}(y_1 - \overline{y})^2 = 26$ 

$$\chi^2 = 1 - 7RSS = 1 - 26 = 0.86$$
TSS 186

L) To compute least Square Solutions:

$$Y_{i} = ln(Z(t_{i})), \quad X_{i} = t_{i}$$
 $\overline{X} = \frac{1}{N} \underbrace{X_{i}}_{x_{i}}, \quad \overline{Y} = \underbrace{1}_{N} \underbrace{X_{i}}_{x_{i}}$ 
 $S_{x}^{2} = \underbrace{1}_{N} \underbrace{X_{i}}_{x_{i}} \underbrace{X_{i}}_{x_{i}} \underbrace{X_{i}}_{x_{i}}$ 
 $S_{x}^{2} = \underbrace{1}_{N} \underbrace{X_{i}}_{x_{i}} \underbrace{X_{i}}_{x_{i}} \underbrace{X_{i}}_{x_{i}}$ 
 $S_{x}^{2} = \underbrace{1}_{N} \underbrace{X_{i}}_{x_{i}} \underbrace{X_{i}}_{x_{i}} \underbrace{X_{i}}_{x_{i}}$ 
 $S_{x}^{2} = \underbrace{1}_{N} \underbrace{X$ 

$$\frac{\beta_1 = S_{xy}}{S_x^2} \qquad \qquad \qquad \beta_0 = \overline{\gamma} - \beta_1 \overline{x}$$

Substituting B, 4 Po in following equation to get & 4. Zo.

$$\beta = -\alpha$$
 $\beta = \ln(z_0)$ 

c) Rython Code: import numpy as no  $\chi = t$   $\gamma = \eta h \cdot \log(Z)$ xm= m. mlan (x) Ym = n/. man (Y) SXX= np. mean (x-xm) xx2) SXY= np. mean ((x-xm) x (1-ym)) beta = Sxy beta 0 = ym - (le x 20m) alpha = - leta! Zo = np. er (letao)

And 5) a) 
$$RSS = \sum_{i=1}^{N} (Y_i - Y_i)^2 = \sum_{i=1}^{N} (\beta x_i - Y_i)^2$$

$$\frac{\partial (RSS)}{\partial B} = \frac{\partial (RSS)}{\partial B} = \frac{\partial (RSS)}{\partial B}$$

$$\frac{\partial(RSS)}{\partial B} = 2 = \frac{1}{2} \left( \frac{B}{X} x_i - 1 \right) x_i^2$$

For minima, but 
$$\frac{\partial(RSS)}{\partial B} = 0$$

$$\Rightarrow 2\frac{1}{2}\left(\beta x_{i}-y_{i}\right) x_{i}=0$$

$$\mathcal{D}(\mathbf{x}_{i-1}^{N}) = 0$$
